

door & gate MONITORING DOOR JUMPER PROTECTION

Keeptenants and visitors safe with door jumper protection that monitors elevator door and gate contacts. This device provides redundancy checking that shuts down the elevator when an open door or malfunctioning door/gate contact is detected. Recently added to compliance regulations in some North American locations, the code provides additional safety measures with regard to unintended movement for older systems.

Overview

SYSTEMS AVAILABLE FOR UPDATE:

- FUJITEC ROYAL SUPERDYNE/ Specific OEM installations performed in the early 2000's

NOTE: This technology became available in the late 90's, so consult with your Fujitec sales representative to determine whether your system is in need of this safety upgrade.

BENEFITS

- Greatly improves system safety
- Cost-effective solution for older systems
- Reduces the risk of serious injury
- Pro-active with future mandates
- Reduces liability exposure

A Proactive Solution

Door and gate monitoring protection was not a standard included on Fujitec Royal Superdyne equipment and some older OEM system installations prior to 2000. This is a redundancy checking safety measure that protects against cab movement when door and gate monitors are out of sequence.

**(There are several solutions available to improve elevator door jumper protection. Consult with your Fujitec sales associate to determine the best solution for your building.)*
