

Pit **SENSOR** DETECTION

Pit sensors are a necessity in buildings where elevators travel below the flood plain, underground or below sea-level. Sensors are designed to notify the controller when flooding is present, keeping the elevator cab from entering the zone where detection occurs.

Benefits

- Easy system integration
- Improves safety in flood-prone areas
- Mitigates possibility of costly repairs/injury
- Cost-effective solution; quick installation

Safety First

There are a number of pit sensor/detector/alarm solutions with varying capabilities. Consult with your Fujitec sales associate to determine the best solution for your building and application needs.
